Cyber Risk Snapshot

A concise, evidence-led view of externally observable security posture for Handover Synthetic 1790242994941.

Prepared for Handover Synthetic 1790242994941

Approved target handover-1790242994941.example

Snapshot completed 24-09-2026 09:43 UTC

Executive Summary

Potential risk: synthetic response is missing Content-Security-Policy.; Potential risk: synthetic DMARC policy is monitoring-only (p=none).

Overall exposure indicator: 20/100 (synthetic triage heuristic).

Weights: low 5, medium 15, high 30 per observation; capped at 100. Errors and timeouts contribute zero and indicate unknown coverage, not safety. This is not a validated risk rating or a probability of compromise.

Snapshot Findings And Evidence

Findings are ordered by severity, highest first; check errors remain explicit.

http_headers

medium

Potential risk - observation

Potential risk: synthetic response is missing Content-Security-Policy.

Method: deterministic mock

Evidence

strict-transport-security: max-age=31536000

x-content-type-options: nosniff

dmARC

low

Potential risk - observation

Potential risk: synthetic DMARC policy is monitoring-only (p=none).

Method: deterministic mock

Evidence

v=DMARC1; p=none; rua=mailto:reports@xy-cyber.example

approval

info

Check outcome - pass

Domain is an approved synthetic demo target.

Method: server-side allowlist

Evidence

demo target matched server-side allowlist

dns

info

Check outcome - pass

Synthetic DNS result returned for demo safety.

Method: deterministic mock

Evidence

A 203.0.113.10

spf

info

Check outcome - pass

Synthetic SPF record was found.

Method: deterministic mock

Evidence

v=spf1 include:_spf.xy-cyber.example -all

tls

info

Check outcome - pass

Synthetic TLS result returned for demo safety.

Method: deterministic mock

Evidence

TLSv1.3

expires in 90 days

Email security posture

dmarc: Potential risk: synthetic DMARC policy is monitoring-only (p=none). (observation)

spf: Synthetic SPF record was found. (pass)

Web and TLS posture

http_headers: Potential risk: synthetic response is missing Content-Security-Policy.

(observation)

tls: Synthetic TLS result returned for demo safety. (pass)

Public asset overview

Approved target: handover-1790242994941.example. Only this target is in scope; no asset discovery was performed.

dns: Synthetic DNS result returned for demo safety. (pass)

Business impact

Email authentication observations may affect trust in outbound mail. Web and TLS observations may affect service trust and availability. Actual impact depends on business context and requires validation; no breach or compromise is established.

Recommended actions

Validate the dmarc observation with the system owner, confirm business relevance, and agree a remediation and retest date.

Validate the http_headers observation with the system owner, confirm business relevance, and agree a remediation and retest date.

Recommended XY CYBER services and next engagement

Primary: Email security review. Secondary: Cloud and application security assessment.

The primary recommendation follows observed email findings when present, otherwise the external target scope. Confirm service fit in a scoped discovery meeting with Business Development and a Technical Analyst before commissioning work.

Methodology and limitations

Scope was limited to approved synthetic demo evidence. This report is not a penetration test, assurance statement, or confirmation of compromise. Observations require technical validation before external use.
